

Product Name : Honokiol
Cat. No. : PC-22371
CAS No. : 35354-74-6
Molecular Formula : C₁₈H₁₈O₂
Molecular Weight : 266.34
Target : Sirtuin
Solubility : 10 mM in DMSO

CAS: 35354-74-6

Biological Activity

Honokiol (NSC 293100) is a natural biphenolic compound derived from the bark of magnolia trees, directly binds to SIRT3 and is an effective activator of deacetylase SIRT3, shows anti-inflammatory, anti-oxidative, anti-tumour and neuroprotective properties.

Honokiol activates SIRT3 and deacetylates mitochondrial proteins.

Honokiol blocks hypertrophic response of cardiomyocytes in vitro.

Honokiol protects mice from developing cardiac hypertrophy, blocks cardiac hypertrophy of wild-type, but not SIRT3-KO mice.

Honokiol attenuates cardiac fibroblasts proliferation and differentiation into myofibroblasts, reduces ROS production and prevents cardiomyocyte death.

Honokiol activates PGC1 α responsive SIRT3 gene promoter leading to increased levels of SIRT3.
