

Product Name : LCKLSL hydrochloride
Cat. No. : PC-24943
CAS No. : 3067165-95-8
Molecular Formula : C₃₀H₅₈ClN₇O₈S
Molecular Weight : 712.35
Target : Other Targets
Solubility : 10 mM in DMSO

CAS: 3067165-95-8

Biological Activity

LCKLSL hydrochloride (Leu-Cys-Lys-Leu-Ser-Leu) is a potent, specific hexapeptide competitive inhibitor of Annexin A2 (AnxA2), inhibits tissue plasminogen activator (tPA)-binding capacity with IC₅₀ of 11 uM. LCKLSL targets the N-terminal tPA-binding site of AnxA2, binds efficiently to cell-surface AnxA2 compared with binding of the control peptide LGKLSL. LCKLSL inhibits the generation of plasmin and suppresses the VEGF-induced activity of tPA under hypoxic conditions. LCKLSL prevents hypoxia-induced angiogenic events in in vivo models of angiogenesis.
