

Product Name : CP-506 mesylate
Cat. No. : PC-25508
CAS No. : 2227304-19-8
Molecular Formula : C₂₀H₃₃BrN₄O₁₁S₃
Molecular Weight : 681.59
Target : DNA Alkylator/Crosslinker
Solubility : 10 mM in DMSO

CAS: 2227304-19-8

Biological Activity

CP-506 mesylate is a DNA alkylating hypoxia-activated prodrug (HAP), shows selective antitumor effects for hypoxic tumor cells and causally related to tumor oxygenation.

CP-506 is designed to be resistant to AKR1C3 metabolism, ensuring highly specific hypoxia-dependent activation.

CP-506 demonstrates cytotoxicity selectively in hypoxic 2D and 3D cell cultures with normoxic/anoxic IC₅₀ ratios up to 203.

CP-506 effectively decreased the hypoxic fraction and inhibited growth of a wide range of hypoxic xenografts.
